DETAILED ACTION

REJECTIONS WITHDRAWN

1. The 35 USC 103(a) rejection of claims 1-11 set forth in the non-final office action of 6/6/2002 has been withdrawn.

NEW REJECTIONS

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Salman et al. (U.S. Patent No. 5,904,812) in view of Edwards et al. (U.S. Patent No. 5,494,554) and Farrington, Jr. et al. (U.S. Patent No. 5,656,132).

Salman et al. teach a roll of bath tissue comprising a wound continuous tissue basesheet having space-apart transverse lines of perforations which define individual tissue sheets for detachment in use (abstract, column 5, lines 16-45) having from about 600 to 800 sheets per roll (column 5, lines 28-34) (applies to instant claims 1-5, 12-16 and 23-27).

Salman et al. disclose applicant's invention substantially as claimed.

However, Salman et al. fail to disclose a base sheet having a void volume of about 8.0 grams per gram of tissue or greater.

Edwards et al. teach a base sheet having a void volume of about 8.0 grams per gram of tissue or greater (column 13, lines 5-63 and column 14, lines 1-16) (applies to instant claims 1, 6-7, 12, 17-18, 23 and 28-29) in a tissue (abstract) for the purpose of providing softer wet-pressed tissues with a lesser tendency to produce lint (column 1, lines 25-30).

Therefore it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to have provided a base sheet having a void volume of about 8.0 grams per gram of tissue or greater in the tissue of Salman et al. in order to provide softer wet-pressed tissues with a lesser tendency to produce lint as taught by Edwards et al..

Salman et al. disclose applicant's invention substantially as claimed.

However, Salman et al. fail to disclose a base sheet having a single sheet caliper of about 0.01 inch or less, or 0.0095 inch or less.

Farrington, Jr. et al. teach a base sheet having a single sheet caliper of about 0.01 inch or less, or 0.0095 inch or less (see Table 1) for the purpose of providing high bulk and low stiffness (column 1, lines 60-67) (applies to instant claims 1, 10-12, 21-23 and 32-33).

Therefore it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to have provided a base sheet having a single sheet caliper of about 0.01 inch or less, or 0.0095 inch or less in the base sheet of Salman et al. in order to provide high bulk and low stiffness as taught or suggested by Farrington, Jr. et al..

Salman et al. and Farrington, Jr. et al. disclose the claimed invention except for the geometric mean stretch recited in claims 1, 8-9, 12, 19-20, 23 and 30-31. However, Farrington et al. teach that machine direction stretch and cross machine direction stretch are variable (column 3, line 61 through column 4, line 5). Thus one of ordinary skill in the art would have recognized that the geometric mean stretch recited in claims 1, 8-9, 12, 19-20, 23 and 30-31 would be readily determined through routine experimentation depending on the desired end results absent some showing of unexpected results since geometric mean stretch is the square root of the product of machine direction stretch and cross direction stretch as defined by applicant on page 2 of the instant specification. Further, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the geometric mean stretch recited in claims 1, 8-9, 12, 19-20, 23 and 30-31 in order to provide high bulk and low stiffness, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges or an optimum value of a result effective variable involves only routine skill in the art (applies to instant claims 1, 8-9, 12, 19-20, 23 and 30-31). In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Response to Arguments

4. While new grounds of rejection have been set forth for claims 1-33, applicant has argued that the secondary reference pertains to creped wetpressed tissues and it is not obvious that the properties of a wet-pressed tissue

could simply be incorporated into a throughdried tissue of Salman as suggested since the methods of making the two base sheets is so different.

In response to applicant's preceding argument, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Miggins whose telephone number is (571) 272-1494. The examiner can normally be reached on Monday-Friday; 1:30-10:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pyon Harold can be reached on (571) 272-1498. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
